2. FUNCTIONS & FEATURES

- KSECB2002XXX-R04 Series LCD type：
- Display Contents   : 20* 2 Characters (5*8 dots)
- Driving Scheme   : 1/16Duty; 1/5Bias
- Driver IC   : AIP31066-002
- Interface   : 8-Parallel
- Operating Temperature   : -20℃ － +70℃
- Storage Temperature   : -30℃ － +80℃
- RoHS Compliant
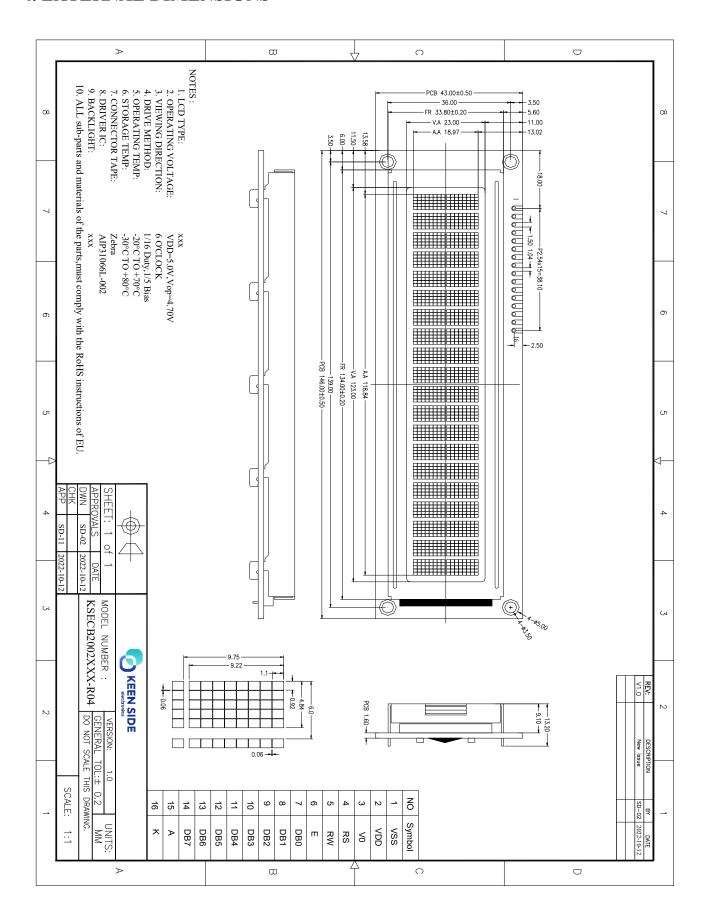

3. MECHANICAL SPECIFICATIONS

- Outline Dimensions   : 146.00(W) x 43.00(L) x 13.20(H)(mm)
- Viewing Area   : 123.00 (W) x 23.00(L)(mm)
- Active Area   : 118.84 (W) x 18.97 (L)(mm)
- Character Size   : 4.84 (W) x 9.22 (L)(mm)
- Character Pitch   : 6.00 (W) x 9.75 (L)(mm)
- Dot Size   : 0.92 (W) x 1.10 (L)(mm)
- Dot Pitch   : 0.98 (W) x 1.16 (L)(mm)
- Weight   : TBD

Read data from RAM	1	1	D7	D6	D5	D4	D3	D2	D1	D0	37us	Read data from internal RAM (DDRAM / CGRAM)

Note:

Be sure the AIP31066 is not in the busy state (BF=00 before sending an instruction from the MPU to the AIP31066. If an instruction is sent without checking the busy flag, the time between the first instruction and next instruction will take much longer than the instruction time itself. Refer to instruction table for the list of each instruction execution time.

Operating life time: Longer than 75,000 hours

(at room temperature without direct irradiation of sunlight)
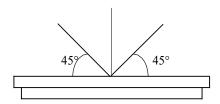

Reliability characteristics shall meet following requirements.

No.	Test Item	Content of Test	Test Condition
1	High Temperature Storage	Endurance test applying the high storage temperature for a long time	+80°C 96H
2	Low Temperature Storage	Endurance test applying the low storage temperature for a long time	−30°C 96H
3	High Temperature Operation	Endurance test applying the electric stress (voltage & current) and the thermal stress to the element for a long time	+70°C 96H
4	Low Temperature Operation	Endurance test applying the electric stress under low temperature for a long time	−20°C 96H
5	High Temperature/ Humidity Storage	Endurance test applying the high temperature and humidity storage for a long time	40°C 90%RH 96H
6	Temperature Cycle	Endurance test applying the low and high temperature cycle −20°C ⟷ 25°C ⟷ 70°C ⟷ 25°C 30min 5min 30min 5min 1 cycle	−20°C/70°C 5 cycles
7	Vibration Test (Package State)	Endurance test applying the vibration during transportation	10Hz – 55Hz, 50m/s, 15min
8	Shock Test (Package State)	Endurance test applying the shock during transportation	Half-sinewave, 100m/s, 11ms
9	Atmospheric Pressure Test	Endurance test applying the atmospheric pressure during transportation by air	40 kPa 16 H

17. Inspection specification

17.1 Visual Inspection

1) Inspect under 2x20W or 40W fluorescent lamp (approximately 3000 lux) leaving 25 to 30 cm between the module and the lamp and 30 cm between the module and the eye (measuring position).

2) Appearance is inspected at the best contrast voltage (best contrast is adjusted considering clearness and crosstalk on screen).

3) Inspect the module at 45° right and left, top and bottom.

4) Use the optimum viewing angle during the contrast inspection.

18. LCD MODULES HANDLING PRECAUTIONS

■ Please remove the protection foil of polarizer before using.
■ The display panel is made of glass.　Do not subject it to a mechanical shock by dropping it from a high place, etc.

■ If the display panel is damaged and the liquid crystal substance inside it leaks out, do not get any in your mouth. If the substance come into contact with your skin or clothes promptly wash it off using soap and water.

■ Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to vary.

■ The polarizer covering the display surface of the LCD module is soft and easily scratched.　Handle this polarize carefully.

■ To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.
　-Be sure to ground the body when handling the LCD module.
　-Tools required for assembly, such as soldering irons, must be properly grounded.
　-To reduce the amount of static electricity generated, do not conduct assembly and other work under dry conditions.
　-The LCD module is coated with a film to protect the display surface. Exercise care when peeling off this protective film since static electricity may be generated.

■ Storage precautions
　When storing the LCD modules, avoid exposure to direct sunlight or to the light of fluorescent lamps. Keep the modules in bags designed to prevent　static electricity charging under low temperature / normal humidity conditions (avoid high temperature /　high humidity and low temperatures below

　0 ℃).Whenever possible, the LCD modules should be stored in the same conditions in which they

　were shipped from our company.

19. OTHERS

■ Liquid crystals solidify at low temperature (below the storage temperature range) leading to defective orientation of liquid crystal or the generation of air bubbles (black or white). Air bubbles may also be generated if the module is subjected to a strong shock at a low temperature.

■ If the LCD modules have been operating for a long time showing the same display patterns may remain on the screen as ghost images and a slight　contrast irregularity may also appear. Abnormal operating status can be resumed to be normal condition by suspending use for some time. It should be noted that this phenomena does not adversely affect performance reliability.

■ To minimize the performance degradation of　the LCD modules resulting from caused by static electricity, etc. exercise care to avoid holding the following sections when handling the modules:
　- Exposed area of the printed circuit board
　- Terminal electrode sections
