SMD Transient Voltage Suppressors

Introduction

Company Profile

SFI, is the trading mark and logo of **SFI Groups**, which are established under the spiritual concept of “**Innovation, Services, Quality, and sincerity**”. There are three subsidiary companies under SFI Groups, including **Sun Flower semiconductor Co., Ltd** established in Aug 1999 (known as Sun Flower Instruments Inc. established in 1984) is responsible for the production mainly on mono-chip, multilayer chip TVS, advanced varistors etc. and the nearly completed brand factory, **Leader Well Technology Co., Ltd** for satisfying the tremendous supplies of the worldwide demand on the varistor in the new century, and the mission of **SFI Electronics Technology Inc** is responsible for the marketing and sales under the independent responsibilities on production, marketing and sales.

Advanced Techniques Applied

In order to meet the market trend and fast market change, we build our R&D team to control the reliability and stability of the products. We have been utilizing the advanced material and manufacturing techniques on producing the electronic elements and parts. In Taiwan, we are the first company to launch the Zinc Oxide (ZnO) based Ceramic Semiconductor devices with full range and with the highly advanced multilayer formation technologies to apply the high density circuit assemblies. We obtained many kinds of patents and awards for excellent product designs, and had been selected by government to attend the international trade fair on behalf of Taiwan.

Our SFI varistors and TVSs reliably protect the electronics systems from overvoltages by limiting surge voltages and by absorbing energy. They are used to safeguard the components, to ensure electromagnetic compatibility and suppress the transients caused by electrostatic discharge. In other words they have the added advantage of greater surge current and energy handling capabilities as well as EMI/RFI attenuation. SFI varistors and TVSs have established themselves as a secure and low-cost means of protection in general-purpose use.

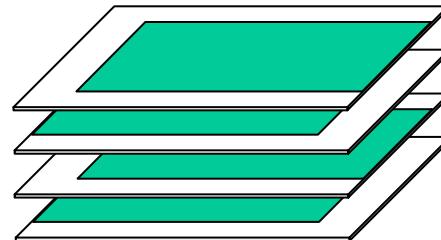

SMD Transient Voltage Suppressors

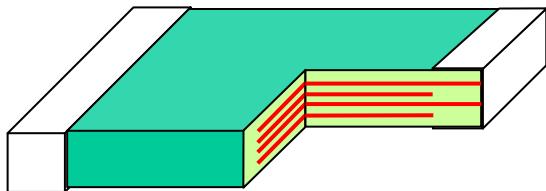

Transient Voltage Suppressor

Major Additions and Improvements

Multilayer Surface Mount Transient Voltage Suppressors (TVS) are manufactured from semiconducting ceramics by the highly advanced multilayer formation technologies, which can offer rugged protection, excellent transient energy absorption and internal heat dissipation. The devices are leadless chip form, eliminating lead inductance and guaranteeing a faster speed of response time of less than 0.5ns, which makes them fast enough to ensure reliable protection against ESD pulse and other specific transient events. These transient suppression devices are significantly smaller footprints and lower profiles than traditional zener diodes or radial MOVs,

multilayer formation technologies

Section of the chip

Material:

1. Body material: ZnO
2. Termination: electrode termination is Ag/Ni/Sn

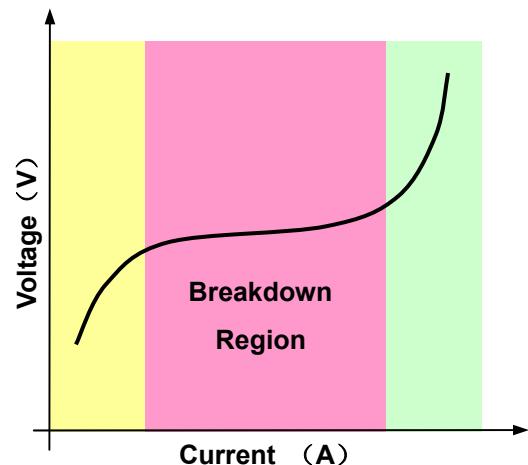

SMD Transient Voltage Suppressors

Information for Designer

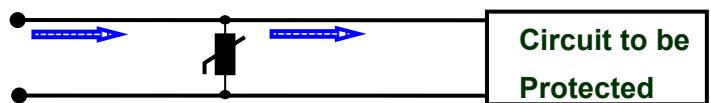

Voltage Dependent Characteristic

Transient Voltage Suppressors (varistors) are voltage-dependent electrical resistors with symmetrical V/I characteristic and the breakdown region, their resistance value decreases with increasing voltage, thus "short-circuiting" further rises in overvoltage.

The Prevention of Overvoltage

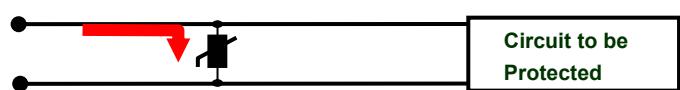

In other words, as long as the voltage increases above the threshold of the TVS, the suppressor will draw a rapidly increasing current, and then the overvoltage is considerably attenuated away from the protected circuit, that is why the inherent protection of the equipments should be supplemented by including specific components that will raise the withstand capabilities to the required level. Varistors provide protection against all kinds of overvoltage and prevent electronic equipment from being damaged by transient events.

Normal State

Overvoltages occur

Overvoltage State

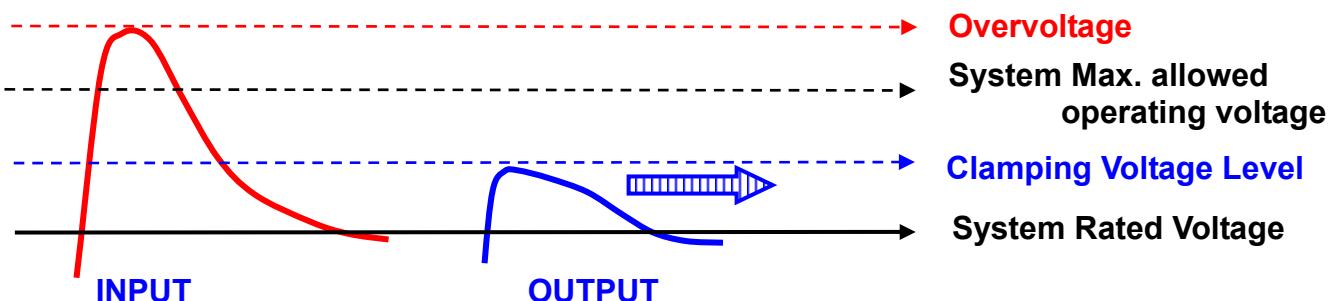

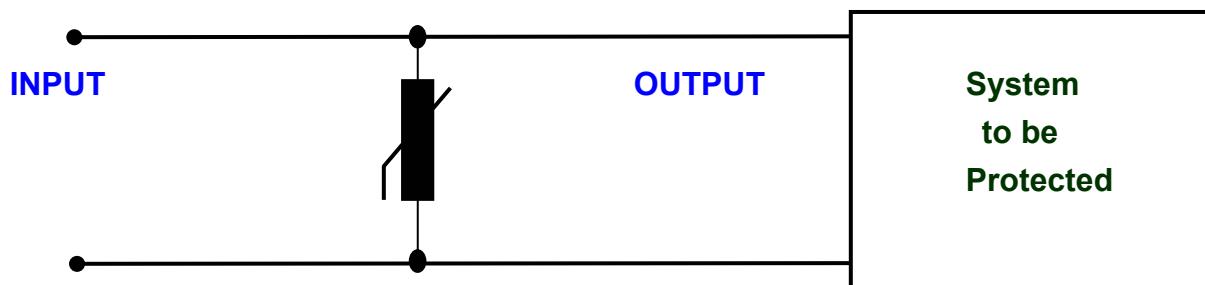

SMD Transient Voltage Suppressors

Information for Designer

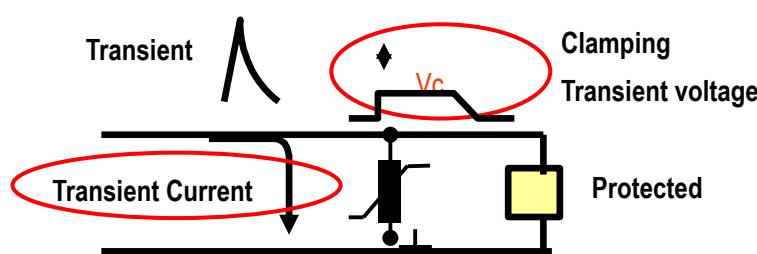

When selecting the TVS for designing within the circuit, some characteristic parameter should be considered carefully to meet the circuit condition. The following guideline are recommended.

1. The surge handling ability of the selected TVS should meet the need of dissipating the expected transient surge current of the protected circuit.
2. The clamping voltage of the selected TVS should be less than the maximum allowed operating voltage of the protected circuit.
3. In high speed data transmission situation. the capacitance of the selected TVS should be considered.
4. The special requests of the TVS's capacitance such as ESD prevention are available, please contact with us.
5. While choosing the TVS, the working voltage of the TVS should be greater than or equal to the normal operating voltage of the circuit.

6. **Protection Principle :** When the voltage increase above the threshold of the varistor, the suppressor draws a rapidly increasing current. The the overvoltage is considerably attenuated.

SMD Transient Voltage Suppressors

The Introduction of Multilayer Surface Varistor

Feature

- ◎ Full range from 0402 to 3220 series
- ◎ Working Voltage from 2.5 to 300 V_{RMS}; 3.3 to 385 Vdc
- ◎ High surge current ability
- ◎ Bidirectional clamping, high energy
- ◎ Fast response time
- ◎ Suitable for ESD Protection
- ◎ Low capacitance design (2.5pf) for fast data transmission
- ◎ Array type design
- ◎ Very low leakage current
- ◎ Good solderability

1. MLC Series: Multilayer surface mount for wide range applications

2. MLA Series Multilayer surface mount design for high energy and surge application

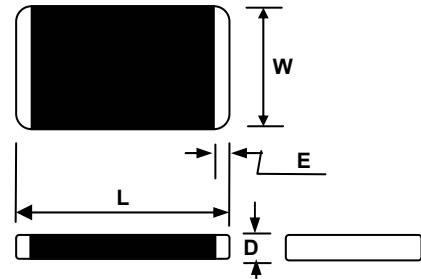

3. CH Series Multilayer surface mount design for high voltage suppressor,
the working voltage could be up to 385Vdc

4. ESD Series Low capacitance design for high data transmission

5. Array Series

6. MOV Series Disc type design

Type	L mm	W Mm	D mm	E mm
0402	1.0 ± 0.10	0.5 ± 0.10	0.6 max	0.25+0.1/-0.1
0603	1.6 ± 0.15	0.8 ± 0.15	0.9 max	0.3+0.1/-0.1

1812	4.5 ± 0.20	3.2± 0.20	2.0 max.	0.5 +0.3/-0.1
2220	5.7 ± 0.20	5.0 ± 0.20	2.5 max.	0.5 +0.3/-0.1

SMD Transient Voltage Suppressors

ML Series Part Number Identification

1. ML Series

SFI 1206 ML 240 C

Series Code

A = Operating voltage from
 $8.0V_{RMS}$ ($11.0V_{DC}$) to $35.0V_{RMS}$ ($45.0V_{DC}$),
 High surge absorption, low clamping voltage.

C = Operating voltage from
 $2.5V_{RMS}$ ($3.3V_{DC}$) to $95.0V_{RMS}$ ($127.0V_{DC}$),
 Wide range application.

Varistor Voltage

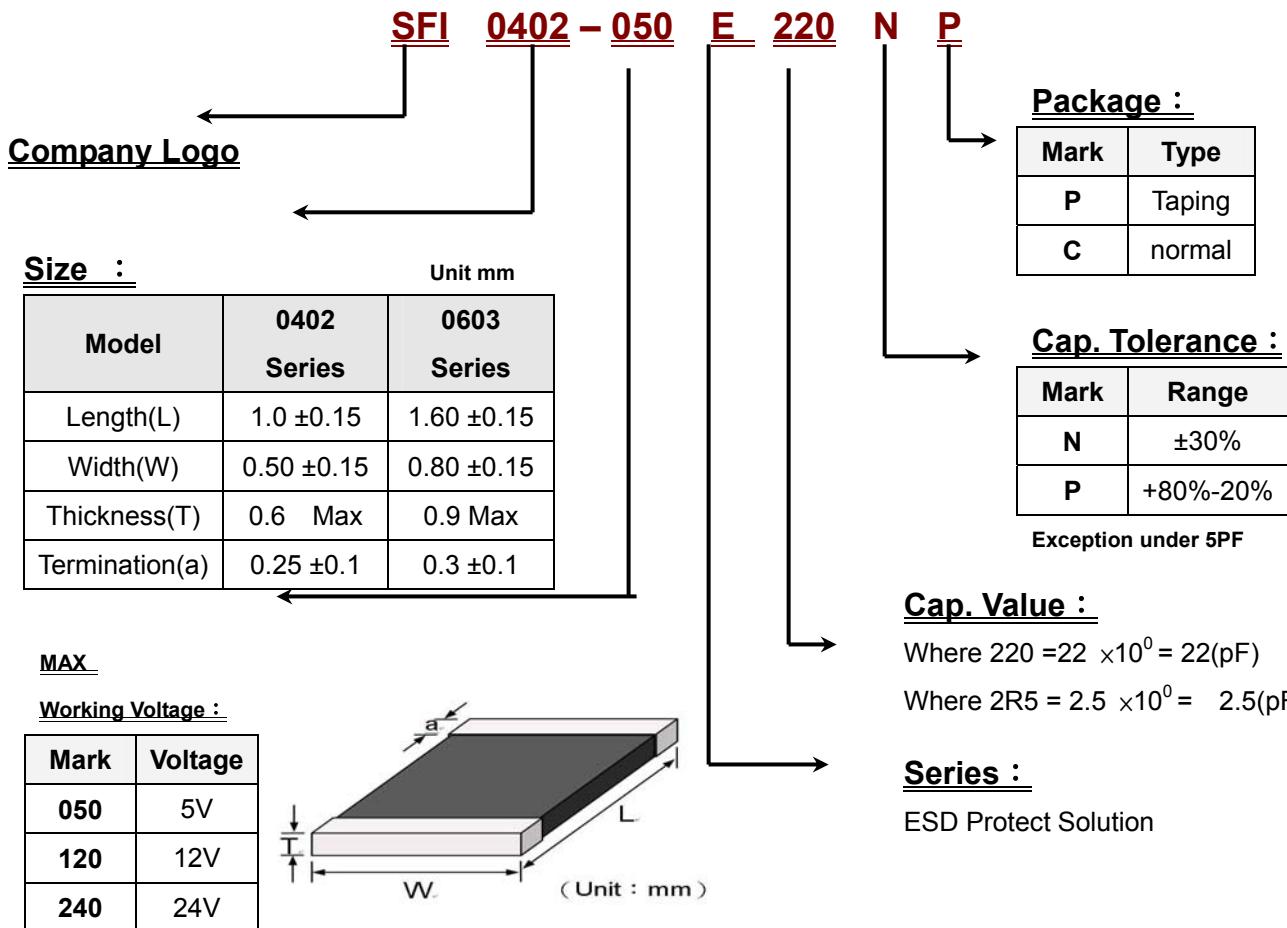

Where: $240 = 24 \times 10^0 V = 24 V$
 $241 = 24 \times 10^1 V = 240 V$

Application Code

ML = Multilayer SMD Varistor

Size 0402; 0603; 0805; 1206; 1210; 1812; 2220

CH Series is the high voltage protection for use in hybrid circuit application in Industrial or power supply equipment utilizing surface mount devices. These devices have significantly lower profiles than radial lead varistor. Protection for 14Vdc to 460Vdc and more higher voltage protection.

SMD Transient Voltage Suppressors

ESD Solutions suppressor series

Electro Static discharge (ESD) is the transients as short duration excursion. Our ESD products are based on Multilayer fabrication technology design to suppress ESD events. Our products meets IEC61000-4-2 standard for Electromagnetic Compliance testing. We supply extra low capacitance and protect integrated circuits protection

Feature

- Fast Response < 0.5nS
- Low Working Voltage 3.3V
- Low Capacitance 2.5pF
- Low Leakage Current < 0.1 uA
- Low Clamping Voltage

Specification (for 0402 and 0603 size) XXXX=0402 or 0603

Part No,	Working Voltage	Clamping Voltage	Leakage Current	Capacitance Volume	Insulation Resistance
(Unit)	VDC (max)	Vclamp(max)	uA(max)	pF	Ohm(Min)

SFIXXXX-240E2R5PP	24	198	0.1	2~4	120

1 The MAX Working Voltage is suited for under 24 V including 3.3V、5V、8V、12V。

2. This Clamping Voltage at which the device stabilized during the transition from high to low impedance 8/20 μ s waveform current 1A

3. All capacitance test under 1MHz, tolerance at +30%(N) exception under 5pF for +80% -20%

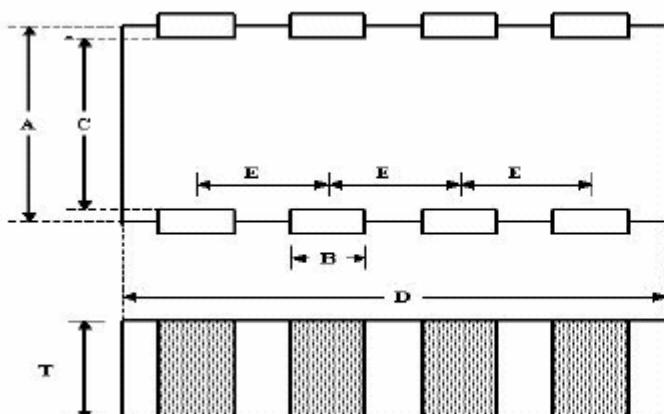

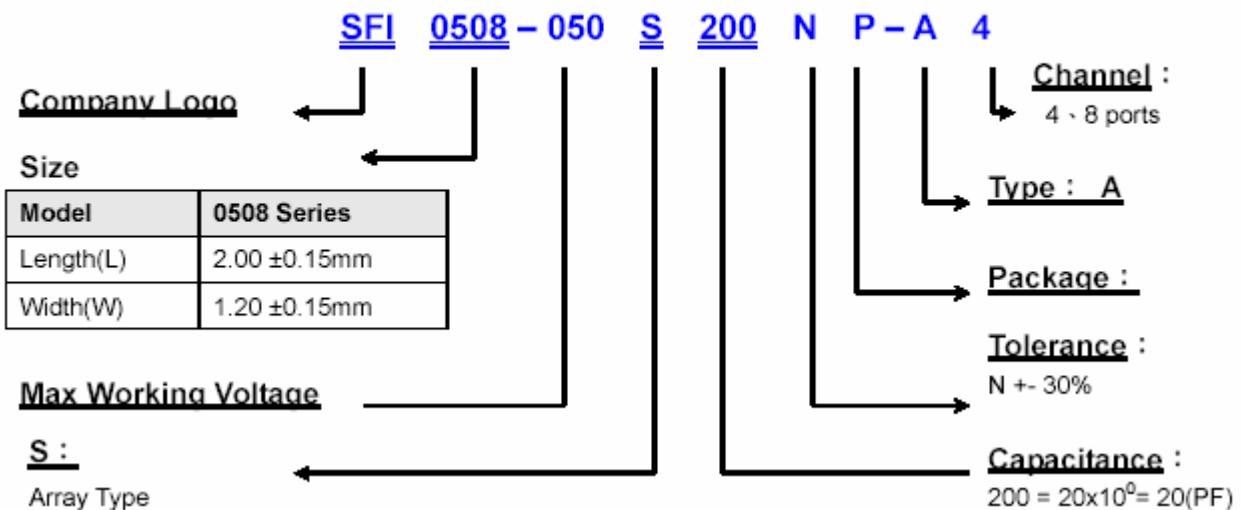

4. The Leakage current was measured at working voltage 5. The Insulation Resistor was measured at working voltage

SMD Transient Voltage Suppressors

New Development and product roadmap item

SFI have the strong R&D team to continual producing new overvoltage protection for Customer valued application and circuit protection. We supply customer all series protection from low voltage to high voltage and from single type to array type. Now our product roadmap are including following. More detail schedule and product specification, please contact our sales team for further request.

1. Extra low capacitance (0.5pf) ESD protection

Chip varistor the material is ZnO and the low capacitance need very high technical to production. SFI have the strong technical and our current mass production item capacitance is 2.5pf. We still keep continual making research for under 0.5pf capacitance for customer application.

2. Low voltage Array series type

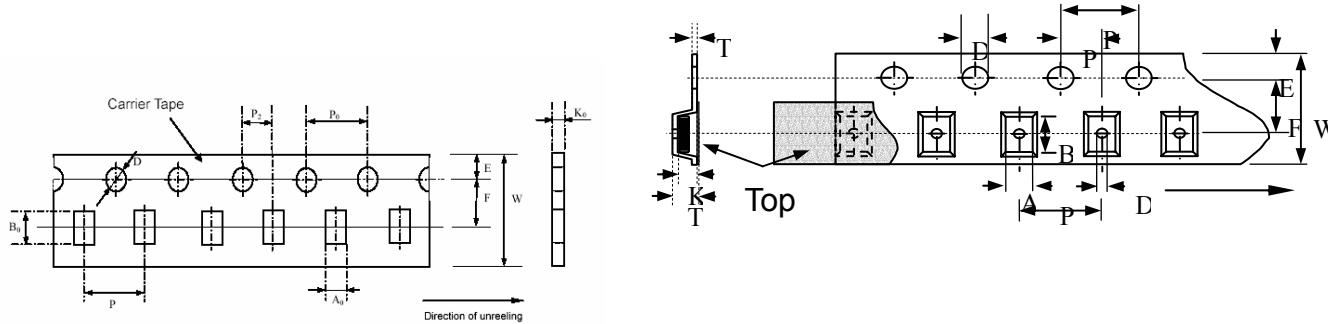

We are also making develop item of array 0508 and 0612 series for the working voltage lower 12.5V and low capacitance request.

3. ESD and EMI function together Array products

We also making new item of array with EMI function for customer.

SMD Transient Voltage Suppressors

TYPICAL APPLICATION

1. ESD Series suggestion

Device Description	Data Rate & Frequency	Rise time	Capacitance
USB 2.0 Data Port	480 M bps	0.5~0.6 nS	< 4pF
USB1.1 Data Port	12 M bps	4~20 nS	5~56pF
Wireless device	1.5 M bps	75~300 nS	5~56pF
RS232、IrDA1.0	115.2 K	1uS~8 uS	10~100pF
Audio (Microphone/Speaker)	20~20K Hz	0.05mS~50 mS	10~100pF

ESD series application field

- Mobile phone
- Digital Camera
- PDA
- Notebook
- MP3 player
- I/O Port, Keypad for portable
- LCD Module
- HUB
- Telecom
- Wireless LAN
- Keyboard

2. ML/CH series application field

- Telecommunication
- Security systems
- Alarm systems
- Medical device and equipment
- Lighting
- AC line protection
- Automotive system
- Controller
- Sensor
- Data Systems
- Power supplier
- IC, Semiconductor
- more application please contact SFI

SMD Transient Voltage Suppressors

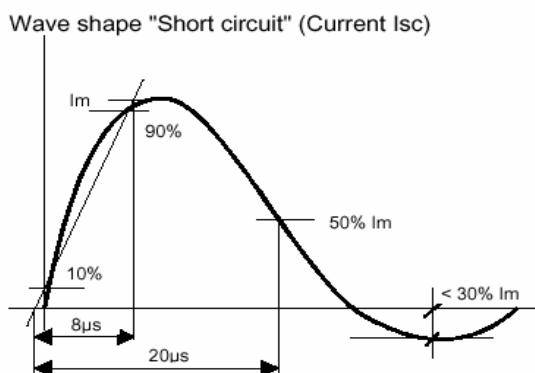

Characteristic Definition

◎ Definition

Characteristics	Test Method or Description
Max. Working Voltage	Maximum steady-state DC operating voltage the device can maintain and typical leakage current at 25°C not exceed 50 μ A.
Varistor Voltage (BDV)	With the specified measuring current of 1mA DC applied. Tolerance of breakdown voltage: 5~8V= $\pm 20\%$; 12~18V= $\pm 15\%$; 18~430V= $\pm 10\%$
Max. Clamping Voltage	Maximum peak voltage across the TVS measured at a specified pulse current (A) and waveform 8/20 μ s.
Surge Current	Maximum peak current within the varistor voltage change of $\pm 10\%$ may be applied with the specified waveform 8/20 μ s.
Surge Shift $\Delta V/V$	The shift of Varistor voltage after suffering the specified surge current.
Energy Absorption	Maximum energy within the varistor voltage change of $\pm 10\%$ may be dissipated with a specified waveform 10/1000 μ s .
Typical Capacitance	Device Capacitance measured with zero voltage bias 0.5V _{RMS} 1KHz; under 100pf measure at 1Mhz; Surge series the capacitance is only for reference.
Nonlinear exponent α	$\alpha = [\log(V_{1mA}/V_{0.1mA}) / \log(I_{mA}/I_{0.1mA})]$
Leakage Current	Typical leakage current at 25°C < 50 μ A; Maximum leakage 200 μ A;

※ Standard Test Condition : Environmental condition under which every measuring is done without doubt on the measuring results. Unless specially specified, temperature, relative humidity are 5 to 35°C, 45 to 85% RH.

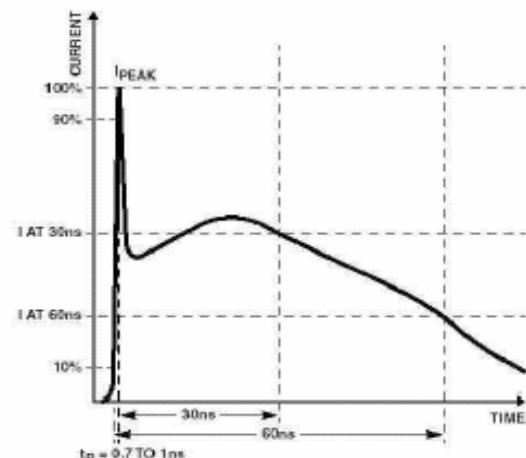

※ 8/20 μ s waveform current (A)

IEC 61000-4-5, EN 61000-4-5,

This generator complies with UL 1449 August 15. 1996 Table B1.1

※ ESD protection waveform current

SMD Transient Voltage Suppressors

Reliability Experiment

Experiment	Test Method and Description		
High Temperature Storage/ Dry Heat	The specimen shall be subjected to $150 \pm 2^\circ\text{C}$ for 1000 ± 12 hours in a thermostatic bath without load and then stored at room temperature and humidity for 1 to 2 hours. Therefore, the change of varistor voltage shall be measured.		
Temperature Cycle	The temperature cycle of specified temperature shall be repeated five times and then stored at room temperature and humidity for one or two hours. the change of varistor voltage and mechanical damage shall be examined.	Step	Temperature
		1	-40±3
		2	Room Temperature
		3	125±3
		4	Room Temperature
High Temperature Load/ Dry Heat Load	After being continuously applied the maximum allowable voltage at $85 \pm 2^\circ\text{C}$ for 1000 ± 2 hours, the specimen shall be stored at room temperature and humidity for one or two hours, Therefore the change of varistor voltage should be measured.		
Damp Heat Load/ Humidity Load	The specimen should be subjected to $40 \pm 2^\circ\text{C}$, 90 to 95 % RH and the maximum allowable voltage for 500 hours and then stored at room temperature and humidity for one or two hours. Therefore the change of varistor voltage should be measured.		
Low Temperature Storage/ Cold	The specimen should be subjected to $-50 \pm 2^\circ\text{C}$, without load for 500 hours and then stored at room temperature for one or two hours. Therefore the change of varistor voltage should be measured.		
Direct contact electrostatic discharge	1. Discharge: contact electrostatic discharge; 2. Voltage : 8KV (Level4) 3. Polarity : +,- ; 4. Number: 10 times ; 5. Interval time : 1sec		
Direct air electrostatic discharge	1. Discharge: air electrostatic discharge; 2. Voltage : 15KV (Level4) 3. Polarity : +,-; 4. Number: 10 times; 5. Interval time : 1~ 3sec		

IEC61000-4 Standard

SEVERITY LEVEL	AIR DISCHARGE	DIRECT DISCHARGE
1	2 KV	2 KV
2	4 KV	4 KV
3	8 KV	6 KV
4	15 KV	8 KV

SMD Transient Voltage Suppressors

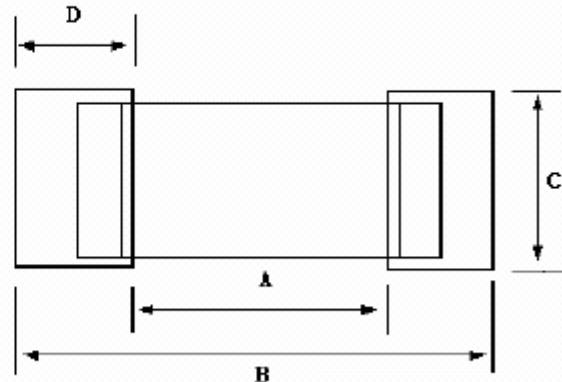

Recommendation for Soldering

5. Soldering Recommendations

5.1 Recommended solder pad layout

(Unit : mm)

	A	B	C	D
0402	0.4~0.6	1.4~1.8	0.5~0.6	0.6~1.2
0603	0.8~1.2	2.2~2.8	0.6~1.0	0.9~1.5
0805	1.0~1.5	2.6~3.2	1.2~1.5	1.1~1.8
1206	1.8~2.5	4.2~5.2	1.2~1.8	1.2~1.8
1210	1.8~2.5	4.2~5.2	2.2~3.0	1.3~2.0
1812	2.5~3.3	5.5~6.7	2.8~3.6	1.3~2.2
2220	3.8~4.6	6.6~7.8	4.8~5.5	1.3~2.2
08CH	5.2~6.4	9.5~10.8	5.0~6.0	2.0~2.8

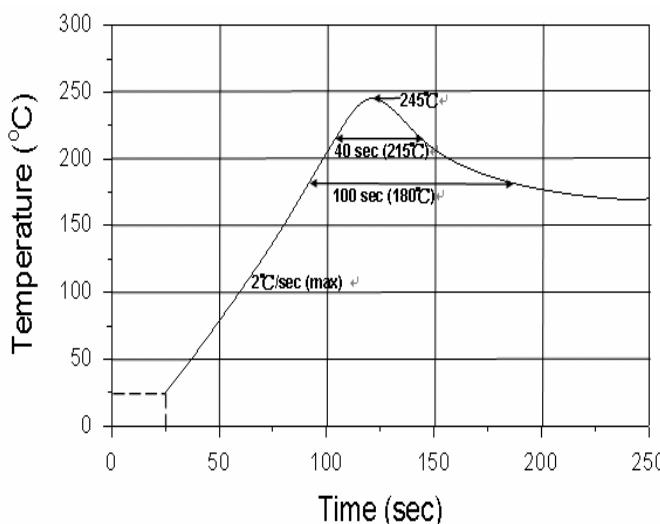

Soldering Recommendations:

Material	Sn/Ag/Cu 96/3.5/0.5 or equivalent
Temperature	260°C, 3 seconds max
Flux	Non Activated.

Recommended soldering temperature profile

1. Reflow Solder Profile

(a) Preheat

- 1.The temperature rising speed is suggested to be 2°C/sec(max).
- 2.Appropriate preheat time will be from 60 to 120 seconds.

(b) Heating

- 1.Careful about sudden rise in temperature as it may worsen the solder ability.
- 2.Set the peak temperature in the range from 240°C to 245°C.

(c) Cooling

- 1.Careful about slow cooling as it may cause the position shift of component.

SMD Transient Voltage Suppressors

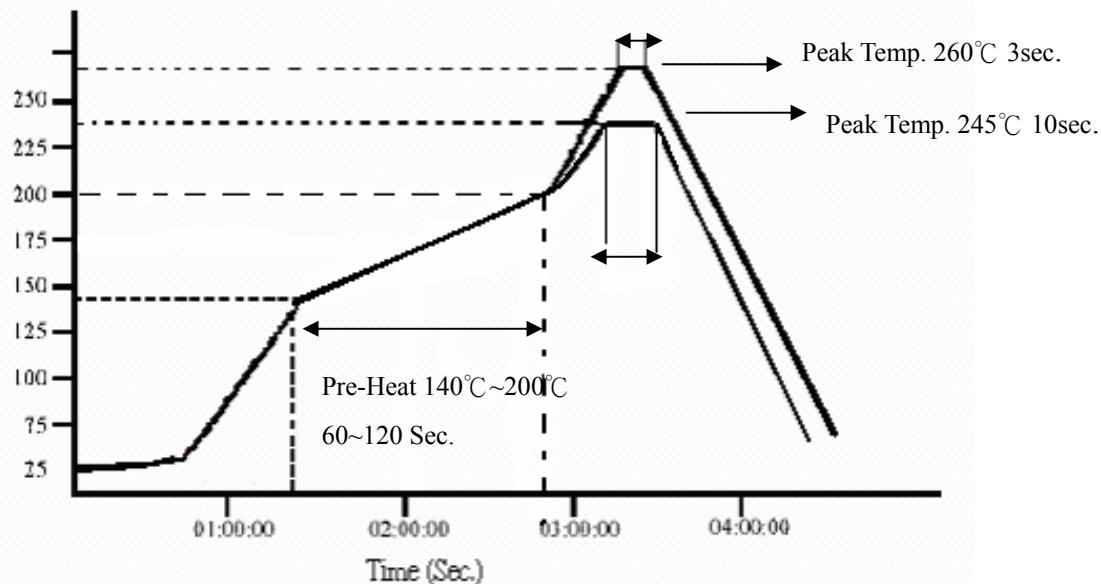

Recommendation for Soldering

2. Major point of SMT reflow

- (a) Solder pad layout : please refer to 5.1
- (b) Steel plate and foot distance printing

Foot distance printing (mm/mils)	Steel Plate thickness (mm)
> 0.65mm/25 mil	0.18mm
0.65mm/25 mils~0.5mm/20mils	0.15mm
0.50mm/20 mils~0.40mm/16mils	0.12mm
<=0.40 mm/16 mils	0.10mm

The IR reflow and temperature of Soldering for Pb Free

☆ IR reflow Pb Free Process suggestion profile

- (1) Soldering recommend paste is Sn 96.5/Ag 3.5
- (2) Ramp-up rate (217°C to Peak) + 3°C/second max
- (3) Temp. maintain at 175 +/- 25°C 180 seconds max
- (4) Temp. maintain above 217 °C 60-150 seconds
- (5) Peak temperature range 245°C +20°C / -10 °C time within 5 °C of actually peak temperature (tp) 10~20 seconds
- (6) Ramp down rate +6 °C/second max.

*Perform adequate test in advance as the reflow temperature profile will vary according to the conditions of the manufacturing process, and the specification of the reflow furnace.

SMD Transient Voltage Suppressors

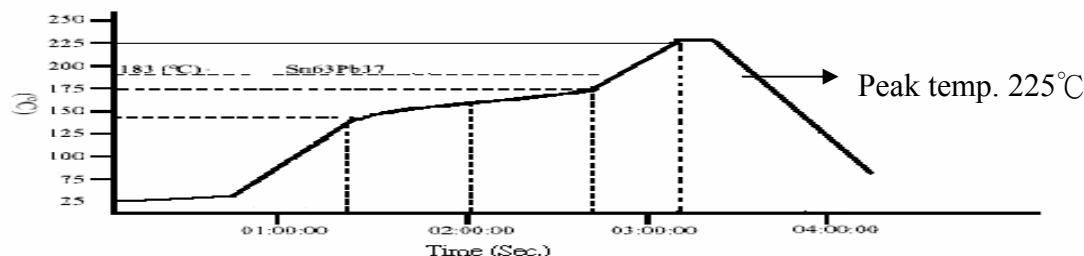

Recommendation for Soldering

Recommended Soldering Condition 1

- (1) Solder :
0.12~0.18mm Thread solder (Sn96.5:Ag3.5) with soldering flux in the core.
Rosin-based and non-activated flux is recommended.
- (2) Preheating
The Varistors shall be preheated so that Temperature Gradient between the devices and the tip of soldering iron is 150°C or below.
- (3) Soldering Iron
Rated Power of 20w max with 3mm soldering tip in diameter.
Temperature of soldering iron tip 300°C max (The required amount of solder shall be melted in advance on the soldering tip.)
- (4) Cooling :After soldering. The Varistors shall be cooled gradually at room ambient temperature.

The IR reflow and temperature of Soldering for normal

☆ IR reflow Process suggestion profile

- (1) Soldering recommend is **Sn 63: Pb 37**
- (2) Ramp-up rate (183°C to Peak) + 3°C/second max
- (3) Temp. maintain at 125 +/-25°C 120 seconds max
- (4) Temp. maintain above 183 °C 60-150 seconds
- (5) Peak temperature range **225°C +/-10 °C (215°C~235°C)** time within 5 °C of actually peak temperature (tp) 10-20 seconds
- (6) Ramp down rate +6 °C/second max.

*Perform adequate test in advance as the reflow temperature profile will vary according to the conditions of the manufacturing process, and the specification of the reflow furnace.

* Recommended Soldering Condition 1

- (1) Solder :
0.12~0.18mm Thread solder (Sn63:pb 37) with soldering flux in the core. Rosin-based and non-activated flux is recommended.
- (2) Preheating
The Varistors shall be preheated so that Temperature Gradient between the devices and the tip of soldering iron is 150°C or below.
- (3) Soldering Iron
Rated Power of 20w max with 3mm soldering tip in diameter.
Temperature of soldering iron tip 300°C max (The required amount of solder shall be melted in advance on the soldering tip.)
- (4) Cooling
After soldering. The Varistors shall be cooled gradually at room ambient temperature.

SMD Transient Voltage Suppressors
